In this article the author describes the process of the development of students' learning as one of a specialist's basic competence. The algorithm of students' learning competence development on the non-specialist subjects (in particular, foreign language for non-linguistic students) is shown; some problems and challenges this process faces are concerned for various types of students. The author suggests some solutions of the problems, such as the increasing of the learners' independent activity efficiency. The results of the author's research of students' independent learning activity are shown in the article, which prove the necessity to increase the efficiency of students' independent activity. Some ways to achieve this purpose are suggested.

Keywords: *competence approach, learning competence, learning activity, independent learning activity, effective independent learning activity, language education in for non-linguistic specialties, motivation, willingness for self-education, self-estimating competency, pedagogical conditions.*
