The article is devoted to the problems of environmental protection in the rapid development of information and communication technologies. There are two aspects of this development. The first is to promote the reduction of environmental pollution. The second is related to the deterioration of the environment due to increased energy consumption and mass growth of household waste. This is determined by the rapid succession of generation of devices and equipment. In the present article the author deals mainly with the second aspect of the problem, generally the activities of mobile operators.

Keywords: *information and communication technologies, power consumption, standards, use of modern technologies.*
