The article highlights forecasts and strategies of education development in Russia, projecting the future and describing the system of measures on pedagogical support of a person. The authors focus on the scenario approach, which is widely used by Russian researchers, analyzing higher education in Russia as a variant of development of the West-European universities, and highlights the measures for the implementation of the project «School-2020». In the article it is noted that education is a sociocultural phenomenon with a great potential for personality formation.

Keywords: *scenario approach, thematic forecast, macro prognosis, inertial and modernization forecast, mesolevel, microlevel*
